Carrier AI Is Now Grading Your FNOL. Here's the Playbook.

Canonical Web Version: https://restorationintel.com/carrier-ai-is-now-grading-your-fnol-heres-the-playbook/

Direct Answer: Carriers are deploying automated workbench triage like Benekiva's Kiva assistant—reported to trim carrier cycle times by up to 84 percent—to score first notice of loss packets before an examiner reads them; shops that omit moisture maps, dimensions, or plain cause narratives get flagged immediately.

Field Benchmark & Decision Matrix

FNOL Component	Legacy Human Tolerance	Automated AI Triage Check	First-Submission Pass Standard
Cause of Loss Note	Short phone summary fixed later	Parses event, date & affected assemblies	2-paragraph plain-language cause narrative
Photo Documentation	Unlabeled mixed camera roll	Flags missing room coverage or context	Wide, medium, tight labeled per affected zone
Area Measurements	'Large wet drywall' prose	Checks numeric SF/LF & room counts	Exact dimensions & sketch quantities attached
Moisture Mapping	Uploaded at job closeout	Flags water claims missing baseline readings	Initial meter readings, locations & dry standard
Missing-Item Kickback	Caught weeks later on supplement	Flagged pre-examiner in initial workbench	Pre-send completeness audit before upload

Practitioner Operational Takeaways

- Assume software—not a slammed desk examiner—performs the first completeness audit on every FNOL and mitigation packet you upload.
- Replace vague scope adjectives with exact dimensions, room labels, and moisture-meter locations paired with an unaffected dry standard.
- Write a clean two-paragraph cause-of-loss narrative linking source, timing, and affected materials so automated summaries do not misclassify peril.
- Complete wide, medium, and tight photo sets on initial arrival so carrier triage tools route the claim forward instead of bouncing it.
