|---|---|
| **Canonical Entity** | STARC Systems |
| **Census Sector** | Drying, IAQ, Containment & Cleaning OEMs |
| **Headquarters** | Brunswick, ME |
| **Ownership Class** | Independent Operating Vendor |
| **Official Website** | https://starcsystems.com/ |
| **Primary Verification Source** | https://www.northbranchcap.com/news |

## Executive Field Summary

Manufacturer of modular, reusable temporary containment wall systems (RealWall, LiteBarrier, FireblockWall) that replace poly sheeting and drywall barriers in occupied healthcare, commercial, and large-loss restoration jobs.

## Core Capabilities & Restoration Workflow Fit

ICRA Class IV/V compliant airtight containment panels, sound-attenuating wall modules, fire-rated temporary partitions, and rapid tool-free installation with negative-air port integration.

## Corporate Ownership & M&A Verification Note

Independent operating manufacturer backed by private equity (Bertram Capital acquired STARC Systems from North Branch Capital in September 2026).

## Procurement Due-Diligence & Field Watch-Outs

Calculate breakeven job count against disposable poly-and-zipper containment labor and material waste; factor panel storage rack space and transport van cube into fleet ROI.

## Ecosystem & Software / Distribution Integrations

Pairs directly with HEPA negative-air machines (Abatement Technologies, Legend Brands, Phoenix) via integrated exhaust-port panels.

## Practitioner Frequently Asked Questions

**Q: What recent ownership change occurred at STARC Systems?**
Private equity firm Bertram Capital acquired STARC Systems from North Branch Capital in September 2026; STARC continues operating as an independent containment OEM.

**Q: When do restoration contractors choose STARC walls over poly containment?**
Occupied hospitals, airports, schools, hotels, and Class-A commercial offices frequently prohibit noisy poly sheeting and require rigid, sound-dampening ICRA-compliant walls.

**Q: Are STARC containment panels reusable across multiple projects?**
Yes; panels are engineered to be sanitized, packed on rolling transport carts, and redeployed across hundreds of occupied restoration and renovation projects.
